

Asana Coding Challenge

November 2013

Write a function that, when given a matrix, prints the items of the matrix in spiral order. You will be timed and given only 30 minutes.

For example:

```
matrix = \
[[11, 12, 13, 14, 15],
 [21, 22, 23, 24, 25],
 [31, 32, 33, 34, 35],
 [41, 42, 43, 44, 45]]
```

Should print:

11 12 13 14 15 25 35 45 44 43 42 41 31 21 22 23 24 34 33 32
